Daily Log

Monday October 28

I continued researching ways to fix the GazeManager issue, or if it even is an issue. I couldn't find much online, so I might just have to play around with those configurations myself to see if that is an issue.

Tuesday October 29

I made my first quarter presentation today. I also made my script to go along with it. Right now, it seems like my first quarter presentation is a little short, so I looked through my proposal to try and find my motivation. I might just elaborate more on the motivation/problem aspect of the project.

Thursday October 31

I gave my presentation today. It went pretty well. I need to get more used to the wordings of my presentation so I don't fumble on my words. After the presentation, I also added more to the motivation and found some graphs that show the increase in people in the CS field.

Wednesday November 6

I played around with the GazeManager today. It didn't really seem to do anything different. So, I guess that is not a problem. So far, everything else seems to be fine. I will do some tests tomorrow to make sure everything is working properly.

Thursday November 7

I continued doing configurations and tested my program out so far to make sure everything is going well. I added a cube and tried moving the perspective around, and that worked and everything was setup properly, so I know I am on track. The next step is to get the cube to move.

Timeline

Date	Goal	Met
October 20	Have the buttons output text on the code playground whenever it is clicked.	No, because I had to redo initial configurations.
October 27	Have the run button work to move the robot.	No, because I had to redo initial configurations.
November 3	Have all the configurations done and be able to have the buttons work.	No, it was a weird week so I didn't get too much time to work on the project itself.
November 18	Have all the configurations done and be able to have the buttons work (same goal as last time.	

Reflection

Doing small tests along the way to make sure everything is working properly is definitely helpful. I am glad I am doing that because it gives me some piece of mind that everything is going well. It also, lets me identify the problem quickly. Progress is definitely slower than I had hoped, but that in part is due to the fact that we had a weird week where I worked on presentations for the majority of the week.
